Flying Bat

This 'finger toy' is easy to make and fun to play with.

Materials needed:

- Black or brown construction paper
- Scissors, stapler and staples
- Markers and white crayon or paint

Print the pattern below and use as a template, or print directly onto construction paper. If printing onto black paper, print in colour so the design comes out in green and shows up well on the black paper. Otherwise, print using black ink onto whatever colour you like. Fold the paper on the dotted line then cut out the bat. Leave bat folded; measure and mark a dotted line 1" from fold. Use markers to outline the wings, draw feet, eyes, mouth, fangs, and ears on each side of the bat. Or you can leave it plain. Staple front of bat two times along marked line. Open wings and press flat. For body, press centre of bat flat. Place bat on first finger. Move hand up and down to flap wings.
